We started the term by looking at ourselves and the book what makes me a me? The children learned about the artist Roy Lichtenstien and created a self portrait in a pop art style.

We then moved onto our topic Buildings by the sea. The children were really excited to learn about The Royal Pavilion and go on a virtual tour of its magnificent rooms. The children learnt about the buildings architect John Nash and the Prince Regents distinctive style. They created their own artwork and leaflets showcasing all of their knowledge of this unique building.

In Science we have been looking at animals, habitats and seasonal changes. We linked this with our Forest School learning and created rain gauges to measure rainfall. We have been checking them every week and have recorded the results. We conducted lots of experiments including collecting woodlice and finding out their favourite living conditions. We also made our very own wormeries and our looking forward to watching what will happen next. One of the children's favourite activities has been creating their own woodland food chain. They learnt that everything has role to play to keep the chain going. They used natural resources to make the chain including a pine cone hedgehog.
